UNITED STATES DEPARTMENT OF AGRICULTURE
AGRICULTURAL ADJUSTMENT ADMINISTRATION
AGRICULTURAL CONSERVATION PROGRAM

A

1944 CROP AND LIVESTOCK GOALS - South Dakota

1943 was another record year for South Dakota in the production of crops and livestock. Farmers are to be commended for their efforts and sacrifices under adverse labor conditions and lack of equipment. The farmer's contribution to the war effort has been of inestimable value but there are certain crops and livestock items which must be produced in still greater quantities in 1944 to meet the needs of the war effort and civilian demands.

1944 goals for the more important crops have been established by counties, while goals for other crops and all livestock and dairy products have been established for the state but are not set up by counties. Some goals have been designated as minimum and others as maximum by areas or counties. Every effort should be made to meet those goals designated as minimum, but goals which are designated as maximum by areas or counties should not be stressed in those areas or counties.

1944 goals for crops or livestock production should not be set up for individual farms. Before the operators are advised of the requested increases or decreases, the county goals should be discussed with the various Department of Agriculture representatives and leading farmers in the county with the view of determining the crops or types of livestock most suitable to the county or areas within the county. When discussing the goals with the operators they should be advised of the desired increase or decrease in terms of percentage as compared to 1943, using the county or state percentage as an indication.

The goals should be discussed with all operators in order to determine those crops, type of livestock, etc., which are applicable to the farm and for which it is most advisable to request increased production.

The breaking of grassland should at all times be discouraged as it is possible to meet all goals for the state by cropping more idle and fallow land without plowing sod.

1944
110

1944 LIVESTOCK AND DAIRY PRODUCTS GOALS

County goals are not being released for any livestock or dairy products. However, all counties to which the items are applicable should make every effort to meet the percentage increase or decrease indicated by the state goals.

MILK COWS - Average number on farms during the year. The state goal for milk cows is 488,000 head compared to 485,000 head in 1943, or an increase of approximately one percent for the state. It is expected that the increase in number of milk cows will be made in the counties east of the Missouri River and that all other counties will maintain their present number of milk cows.

MILK PRODUCTION - Due to the increased demands for milk and milk products the state goal for milk production has been increased to 1,952,000,000 pounds or an increase of approximately nine percent over the 1943 production. A portion of the increased production should come from the increase in number of milk cows in the eastern counties, but the greater share of the increase will have to be met by better feeding and care of the milk cows in all counties. All counties should urge their operators to increase the milk production on their unit as much as possible.

BEEF COWS - On farms Jan. 1, 1945 - The state goal for beef cows on farms as of Jan. 1, 1945 is 400,000 compared with 408,000 on Jan. 1, 1943 or a decrease of about two percent from the number on farms Jan. 1, 1943. It is expected that this goal will be met by increased marketings of beef cattle, direct marketing of range cattle and less pen feeding in eastern counties.

ALL CATTLE AND CALVES - On farms Jan. 1, 1945. The state goal for all cattle and calves on farms Jan. 1, 1945 is 2,126,000 head compared with 2,133,000 head Jan. 1, 1943 representing a very slight decrease for the state as a whole. It is expected that the greater share of the decrease will be made in the west river counties due to increased marketings of beef cattle and that the increase in number of milk cows in the east river counties will partially off-set the decrease in beef cattle.

HOGS - SPRING AND FALL FARROW - The state goal for hogs to farrow in the spring of 1944 is 475,000 compared to 461,000 farrowed in the spring of 1943 or an increase of approximately three percent. The state goal for hogs to farrow in the fall of 1944 is 125,000 compared to 123,000 farrowed in the fall of 1943 or an increase of approximately two percent.

Hog production in South Dakota is not in excess of the production during the pre-drought period. There is considerable room for expansion of hog production especially in some areas of the state, and an increase should be urged wherever sufficient feed and marketing facilities are available.

ALL SHEEP - Number on farms Jan. 1, 1945 - The state goal for all sheep on farms Jan. 1, 1945 is 2,400,000 compared to 2,492,000 Jan. 1, 1943 or a decrease of approximately four percent. The west river counties are expected to make the greatest reduction in all sheep by increased marketings. There should be some reduction in all counties due to liquidation of breeding stock depending upon the feed supplies and labor available.

HENS AND PULLETS - Number on farms Jan. 1, 1944 - The state goal for hens and pullets on farms Jan. 1, 1944 is 10,914,000 compared to 10,106,000 Jan. 1, 1943 or an increase of approximately eight percent. An increase in the number of hens and pullets on farms should be urged in all counties where housing facilities and feed supplies are available.

EGG PRODUCTION - The state goal for 1944 egg production is 95,000,000 dozens compared to 82,500,000 dozens in 1943 or an increase of approximately fifteen percent. A part of the increased egg production will be achieved through the increase in the number of hens and pullets, but the greater share of the increase must result from better care and feeding of poultry flocks. All operators should be advised of the support price of thirty cents a dozen which will be maintained through June 30, 1944.

ALL CHICKENS - The state goal for all chickens in 1944 is 21,000,000 compared to 21,217,000 in 1943 or a reduction of approximately one percent. There should be a general decrease in all chickens by an increased slaughter and marketing of cockerels and a more rigid culling of flocks.

TURKEYS - The state goal for turkeys in 1944 is 1,000,000 compared to 712,000 in 1943 or an increase of approximately forty percent. An increase in the number of turkeys raised should be urged in all counties where sufficient feed is available and other conditions suitable.

1944 CROP GOALS

Following are the recommended 1944 county goals as determined for the most important crops in South Dakota, together with a comparison to the 1943 production. Other crops are listed as a state goal with a brief explanation of the desired increase or decrease.

CORN - A minimum goal for all counties east of and bordering the James River and a maximum goal for all other counties. The 1944 goal for South Dakota is 3,900,000 acres compared to the 1943 planted of 3,834,000 acres, or an increase of approximately two percent for the state as a whole. Corn is a vital crop needed for the maintenance of livestock and dairy production. Every effort should be made to meet the indicated goals in those counties for which the goal is designated as minimum. The production of corn in other counties should not be stressed.

WHEAT - A minimum goal for all counties except those with a goal of 100 percent or less of the 1943 planted. The 1944 goal for South Dakota is 3,800,000 acres compared to the 1943 planted of 3,125,000 acres, or an increase of approximately twenty two percent for the state as a whole. The planting of wheat should not be encouraged in those counties with a goal of 100 percent or less of the 1943 planted, but all other counties should urge plantings in line with the requested increase.

FLAX - A minimum goal and increased plantings to be urged in all counties with a goal of more than 100 percent of the 1943 planted. The planting of flax should be discouraged as much as possible in those counties with a goal of less than 75 percent of the 1943 planted. The 1944 goal for South Dakota is 600,000 acres compared to the 1943 planting of 665,000 acres, or a decrease of approximately ten percent.

SORGHUMS - Includes all sorghums regardless of type or use. A minimum goal and increased plantings to be urged in all counties with a goal of more than 100 percent of the 1943 plantings. Special emphasis should be made towards increasing the planted acreage in those counties with a goal of more than 120 percent of the 1943 plantings. The 1944 goal for South Dakota is 1,000,000 acres compared to 809,000 acres planted in 1943 or an increase of approximately twenty four percent.

POTATOES - A minimum goal for Clark, Codington, Hamlin, Deuel, Butte and Lawrence Counties. Every effort should be made to meet the desired increase in these counties. All other counties should urge the planting of sufficient potatoes to meet the local requirements. Potato goals include all potatoes and are not limited to acreages of three or more. The goal for South Dakota is 51,000 acres compared to 54,000 acres planted in 1943 or a decrease of approximately six percent.

SOYBEANS - Soybeans is one of the major war crops and although goals have not been determined for all counties, the planting of soybeans should be encouraged where conditions are favorable and marketing facilities are available. Soybean goals are determined on the basis of the acreage harvested for beans. The acreage of soybeans harvested for beans depends upon the weather during the growing and maturing season. For this reason, both the planted and harvested acreages are listed for 1943. The county goals for 1944 are for soybeans harvested for beans, but when discussing the goals with the operators they should be discussed in terms of planted acres as the greater share of soybeans planted in South Dakota are planted for harvest as beans. The goal for South Dakota is 35,000 acres compared to 40,000 acres planted in 1943 or a decrease of approximately thirteen percent from the planted acreage. The acreage harvested in 1943 was 23,000 acres so that the 1944 goal represents an increase of approximately fifty two percent over the 1943 harvested.

SUGAR BEETS - Sugar Beet goals have been established as minimum goals for counties in the sugar beet area and every effort should be made to meet or exceed the goals. The goal for South Dakota is 10,000 acres compared with 6,367 acres planted in 1943 or an increase of approximately fifty seven percent.

OATS AND BARLEY - Oats and barley are crops necessary as feed to maintain live-stock production but should not be planted at the expense of more vital crops such as flax, corn, wheat, etc. Oats and barley both being feed crops, a combined state goal of 4,600,000 acres was established for South Dakota compared with 4,848,000 acres planted in 1943 or a decrease of approximately five percent. County goals are not being released for oats and barley but 1944 plantings should be made in line with the local feed requirements and the percentage indicated above for the state as a whole.

RYE - HARVESTED - Rye is a minor crop for South Dakota and due to the fact that rye for harvest in 1944 has been planted, no 1944 county goals are being released. The goal for South Dakota is 400,000 acres compared to 522,000 acres harvested in 1943 or a decrease of approximately twenty three percent.

DRY EDIBLE BEANS - Dry edible beans have not been extensively raised in the past in South Dakota. For this reason, no county goals are being released. The state goal is 6,000 acres and every effort should be made to encourage the planting of dry edible beans in those areas where the soil and climatic conditions are suitable. The prospects of grasshopper infestation must also be considered as well as the shipping and marketing facilities.

TAME HAY - HARVESTED - The goal for South Dakota is 635,000 acres compared to 566,000 acres harvested in 1943 or an increase of approximately twelve percent. This goal includes all types of tame hay such as legumes, failed small grain cut for hay, etc. County goals are not being released for tame hay but every effort should be made towards increasing the acreage of tame hay harvested especially the higher yielding legumes such as alfalfa.

ALFALFA AND SWEET CLOVER SEED - The harvesting of alfalfa and sweet clover seed depends to a great extent on climatic conditions. For this reason, no county goals are being released. The state goal for alfalfa seed is 55,000 acres harvested compared with 22,000 acres harvested in 1943 or an increase of approximately one hundred fifty percent. The state goal for sweet clover seed is 45,000 acres harvested compared with 13,000 acres harvested in 1943 or an increase of approximately two hundred forty six percent. Every effort should be made to meet the percentage increase requested in the acreage of these two crops harvested for seed.

PROCESSED VEGETABLE - Processed vegetables include the following crops when sold for commercial processing but does not include those crops sold on the market for fresh consumption: Snap beans, sweet corn, green peas, tomatoes, lima beans, beets, cabbage for kraut, pickles, spinach, asparagus, etc. The state goal for processed vegetables is 1000 acres. No county goals are being released but it is expected that the state goal will be met by those counties along the eastern border of the state and the counties in the irrigation area. All counties having the facilities for shipment to processing plants and the proper soil and growing conditions should urge the planting of these crops.
